

STATEMENT OF DECLARATION ON ARTIFICIAL INTELLIGENCE USE

In adherence to the university policy on the use of **Artificial Intelligence (AI) for Research Projects, Creative Works, Thesis, and Dissertations** (E.O. 46, 2024), the researchers have outlined the usage of AI in the case study for the Data Structures and Algorithms course from October 18 to November 13, 2025.

I. UTILIZATION OF AI TOOLS AND SYSTEMS

The following AI Tools and Systems were used in this case study:

- 1. Gemini and ChatGPT:** These AI Models were used as it gave the researchers access to more advanced and in-depth analysis and results of desired prompts, such as code debugging and refactoring for better readability; summarizing the overview of program files for presentation and code comments; and the sample dataset generation (.csv file) for the program.
- 2. GitHub Copilot:** This AI Model was used because it provides researchers with easier code generation and bug recognition during program development.

II. RATIONALE FOR AI TOOLS AND SYSTEMS USE

- 1. Google Gemini 2.5 Pro:** This language model was applied as it offers a deeper understanding and output of prompts through its free 1-year trial for students.
- 2. OpenAI ChatGPT:** This language model was applied as the model offers a more personalized output, where the researchers can highlight some parts of the model's output to further refine their result.

III. ACKNOWLEDGMENT OF ACCOUNTABILITY IN AI USE

The researchers acknowledge the imperative of accountability and responsibility for potential unintended consequences or errors arising from AI use. Consequently, conclusions will be retracted should AI-induced errors be identified within the case study.

Consistent verification of AI-generated outputs was conducted, ensuring accuracy and reliability for the case study through rigorous prompt review and model correction before implementation.

Furthermore, the research team maintained continuous awareness of recent updates and developments pertaining to the utilized AI models to preemptively address potential performance issues that might impact the case study. To facilitate reproducibility, this declaration is included in the submitted GitHub repository.
